WE MAKE YOUR
LOGISTICS EFFICIENT
Know more about our IT Solutions for Supply Chain

WE BOOST YOUR LOGISTICS

Information Technology (IT) has become a must for almost any logistics operation. The right use of IT helps companies to get **better services** to their customers with no extra cost nor additional efforts. If your company is looking to set your logistic operation into a new level, you will need IT to get it there.

In **Globaltech**, we have the knowledge to **merge IT and Logistics**. We have been working in logistics for the past 15 years, not only at the vendor side but also as part of well-known 3PL and Hi-Tech companies.

More than 50 running cross industry implementations all over **US & South America** certify our experience. Serving to satisfied customers in 3PLs, distributors, food & beverage, Hi-Tech, retail, manufacturing, automotive and many other industries.

THE GLOBALTECH WAY

We improve our customers' logistic processes working with them introducing cutting edge technology, software and best practices into their operations. We consider IT as a major tool to achieve **outstanding results**.

We get into our customers operations from the beginning, understanding the way they performing their activities. When we have a complete understanding about its operation, we work with them to set up the right goal to achieve the next level; best practices supported by IT as a backbone.

BRINGING INFORMATION TECHNOLOGY
TO YOUR SUPPLY CHAIN

Having the right Information Technology for your logistics is the key success factor to achieve a highly efficient supply chain.

However, taking the decision to apply IT to your logistic processes such as warehouse and transportation is just the first step. A **well-planned implementation** plan is as important as choosing the right software and hardware. Everybody knows about great software wrongly implemented producing negative results.

Whether you need a **short-term solution** for a specific challenge, a **long-term engagement** to build an enterprise logistic IT strategy, or even a **roadmap** to meet overall business objectives, GlobalTech is the right partner to move forward with.

Our Services

- Supply Chain Design: We study your company, products & customers to create optimal processes.

- IT Planning: We implement information systems strategies according to your company's needs.

- IT Assessment: Are you sure that the best IT solutions are running in your business? We can help you to find out.

- Latin American Expertise: We are the perfect partner to set, growth and optimize your logistics operations in Latin America.

OUR SOFTWARE SOLUTIONS

Our software optimizes the daily activities of 3PLs, transport companies, distributors, manufacturers and industries in general. We master best practices of software systems development, but more importantly, we know the logistics field better than anyone. Our solutions include:

DEPOT WMS® is an integrated, reliable, flexible and secure warehouse management system. It provides end-to-end traceability of the operation, starting with product reception all the way through product delivery, taking advantage of the benefits of RF technology.

It generates a series of specific improvements, such as reduction of processing times, it eliminates errors caused by manual activities, increases your staff's productivity and greatly improves your warehouse's occupancy rates.

TRANSPORT TMS® was designed to manage complex distribution operations of goods. It allows focusing on the service provided to the customer, working on variables such as vendor selection, route optimization, vehicle utilization, cost reduction and operational traceability.

TRANSPORT TMS APP® is a mobile app designed to report information and distribution events in real-time. It allows carriers & delivery personnel to update the status of any shipment from a smart phone along the entire distribution process.

Official Partner for USA

An **online platform** that allows you to manage and optimize multiple **delivery routes** in the easiest and smartest way. If your clients require your product during certain hours and your trucks have a limited load capacity, SimpliRoute processes that information and creates optimal routes, which can be tracked in real-time.

LOGISTICS IT EXPERTS

GLOBAL SOLUTIONS

We are much more than a software company: We provide logistics solutions.

We understand the day to day faced by a logistics operation, its problems and needs.

For over 15 years we have been optimizing the daily activities of logistics operators, transport companies, distributors & manufacturers.
